Os system	Browser	Test date	Desktop functionality	Desktop layout	Comments	Tablet functionality	Tablet layout	Comments	Mobile functionality	Mobile layout	Comments
windows 10	Chrome	12/28/2021	X	X	Pages aligned and working	X	X	Pages aligned and working	X	X	Pages aligned and working. Tested on my personal mobile device as well.
windows 10	Firefox	12/29/2021	X	X	Pages aligned and working	X	X	Pages aligned and working	X	X	1. Adjusted the height on the contact container to get it to fit on both Firefox and chrome, otherwise the footer came up and overlapped content. It is longer than I like on Firefox, but if the space is not there, then it overlaps. 2. adjusted font size of footer to .9em 3. I found an issue with setting the vh of the pages, It was so different on for each size mobile. In order to make the shorter ones work, the longer ones have a lot of extra space. Not sure how to fix that.
windows 10	Edge	12/30/2021	X	X	Pages aligned and working	X	X	adjusted image size on blog for tablets	X	X	adjusted all media queries to start at 280 for the smallest screen
mac - trough browser stack	Safari		X		Pages aligned and working. I could not buy a plan at this time, so could not test every size in the minute it gave me.
